

First Contact™ Polymer Cleaning Solution does something SO ASTOUNDING, IT'S HARD TO BELIEVE! - It **CLEANS GRATINGS & PHASE MASKS!!!**

Now you can believe it!! Here is proof!
(There is not much more to say, these pictures are worth about 8,000 words.)

First Contact™ Polymer Cleaning Solution is very versatile. In addition to cleaning diffraction gratings (impossible!), it lifts from nanostructures, removes contamination, and makes precision optical surfaces pristinely clean.

When storing diffraction gratings or other precision optics for any period of time, you can apply **First Contact™**, then just peel off before use. The inert polymer film protects from dust, abrasions, oxygen, water and water vapor, gaseous sulfur compounds, and fingerprints.
