BrixX[®] NB

Narrow-bandwidth diode lasers with fibre-coupled or free-space output

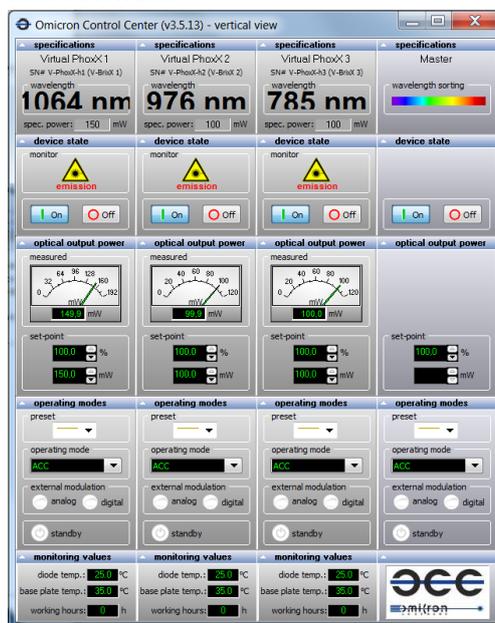

The versatility of the BrixX[®] NB lasers covers a wide range of applications like RAMAN spectroscopy, laser seeding, metrology and many more. Depending on the model, the lasers are available with fibre coupled or free-space output and offer narrow spectral emission compared to standard diode lasers. Analogue intensity control and digital modulation as well as a Light-Monitoring output can be used to control the laser by electronic signals. The USB2.0 and the RS-232 interface allow deep integration into PC controlled setups and software environments like LabView.
