New: MeasureReady™ Model 155 Precision I/V source

An ultra-low noise, high precision current/voltage source for scientific applications

Model 155 I/V sources are ideal for electronic material characterization and other demanding scientific applications requiring a precise, low-noise supply of current or voltage. Supplying 1 W maximum from DC to 100 kHz over a broad output range, they provide a solid foundation for I/V curve, Hall effect, and other fundamental measurements.

Combined with a quality digital meter such as the Keysight 34420A, the Model 155 I/V source provides greater measurement flexibility and performance when compared to some traditional all-in-one source-measure units (SMUs).
